

Table A1. Location of Sampled Wells in Relation to Productive Aquifers and Urban and Rural Areas

aquifer (Figure 1)	percentage of U.S. surface area, underlain by aquifer	Number of sampled wells associated with aquifer	percentage of total number of sampled wells	number of sampled wells in urban areas	number of sampled wells in rural areas
alluvial	7	465	16	88	377
sand and gravel	20	830	28	120	710
sandstone	8	153	5	37	116
carbonate	7	327	11	68	259
sandstone/carbonate	6	139	5	11	128
volcanic	3	396	13	15	381
crystalline	0.2	0	0	0	0
<u>not a productive aquifer</u>	48.8	638	22	67	571
Total	100.0	2948	100.0	406	2542

TABLE A2. Volatile Organic Compounds Detected by Land-Use Setting At a Reporting Level of 0.2 µg/L

[dw, drinking water; min., minimum; max., maximum; MCL, Maximum Contaminant Level; HA, Health-Advisory Level, lifetime 70-kg adult; RSD5, risk-specific dose associated with a risk of one additional person in one hundred thousand (1.0×10^{-5}) contracting cancer over a 70-year life; µg/L, micrograms per liter; >, greater than]

Wells in urban areas (≥ 386 persons/km 2), total = 406 wells											
compound	primary use	detections/ wells with analysis	detected concentrations, (µg/L)			drinking-water criteria			taste/ odor threshold		
			min.	Median	max.	value (µg/L); [type of standard, MCL, HA, or RSD5 (4)]	percent exceeding all wells	dw wells	Threshold ¹ (µg/L) (reference)	percent exceeding all wells	percent exceeding dw wells
